

Name

afar - all ridesharing services in one spot.

Summary

Ever been at the airport switching between ridesharing apps to find the best price? No more looking afar, we are here to help you with a car! Browse all ride-sharing applications on one screen, and be able to make your choice there giving you the best price without the hassle of rotating between several applications to create unwanted stress. afar will list the cheapest or fastest ride-sharing options for your destination, and after clicking the one you want, it will take you to the respective app/website to ensure you get the perfect ride with the least hassle.

Purpose

Comparable to Expedia or Google Flights for flight services, which pull together many different airlines in one place, afar plans to bring together Uber, Lyft, and other ride-sharing services together in a one-stop shop. The existence of this market for flights but not for ride-sharing is notable and suggests a space that needs to be filled.
